

# Hands-on Lab: Generative AI for Data Generation and Augmentation

Estimated time needed: **30** minutes

One of the principle advantages of generative AI is its ability to generate realistic synthetic data. The synthetic data is generated when a pretrained generative model responds to either a prompt, create new data samples, or transfers learns on a given data set. In addition, it creates samples that can augment the existing data set while maintaining the statistical distribution and interpretability of the data set.

In this lab, you will learn how to use generative AI to generate synthetic data samples and transfer learns on a given data set.

## Learning Objective

In this lab, you will learn how to use a popular tool, [Mostly.ai](#), to create synthetic data samples to augment a CSV data set.

## Data Set

You will use a data set that includes insurance records.

The data set is available at the following link:

[Insurance Dataset](#)

This data set is a cleaned-up version of the [Medical Insurance Price Prediction](#) data set, available under the [CC0 1.0 Universal License](#) on the [Kaggle](#) website.

## Steps

### 1. Download the data set

The first step is to download the dataset on your machine. You will need to upload this file to the interface in a subsequent step. Select the link provided in the **Data Set** section to download the data set.

### 2. Open the website

Select the following link to open the mostly.ai website and interface.

<https://mostly.ai/>

This link opens in a new browser tab, and you should see an web page that looks similar to the following screen capture:

The screenshot shows the homepage of the Mostly AI website. At the top, there's a navigation bar with the 'MOSTLY AI' logo and links for 'Platform', 'Synthetic Data', 'Resources', 'Company', 'Pricing', and 'Docs'. A blue banner at the top left contains a lightbulb icon and the text 'Download the complete guide to AI-generated synthetic data!'. The main content area features a large blue arrow icon pointing right, followed by the text 'Synthetic Data.' in a white rounded rectangle, and 'Better than real.' in large black font below it. A paragraph of text explains the benefits of synthetic data, and a bright green button labeled 'Request a demo' is at the bottom left. A large black bracket is on the right side of the page.

▶ **Synthetic Data.**

**Better than real.**

Still struggling with real data? Use existing data for synthetic data generation. Synthetic data is more accessible, more flexible, and simply...smarter.

[Request a demo](#)

### 3. Create an account

You can create an account on this website free of charge, or you can simply log in using your Gmail ID. After you log in, you'll see the following interface.

 How to start?  
**Explore the available generators and start generating data.** [+ New synthetic](#)

#### 4. Upload the data set

Upload the CSV file of the data set to the interface by using the upload option available on the console. After you upload the data set, you will see its filename on the console. Then select Proceed as seen in the following screen captures:

< 📁 Add data

×

**Upload file**

Drag a file here or click to browse  
CSV, TSV, and Parquet files are supported.

5. Data configuration settings

You can choose to modify the category of an attribute, or you can choose to include a parameter in the augmentation process without these settings. For the purposes of this lab, do not change these settings. Simply select `Configure models` to go to the model configuration settings.

Add data

6. Model configuration settings

You can modify the max training time, number of epochs, sample size, and other settings to generate the best possible model based on your requirements. For the purpose of this lab, use the default settings.

## Correlations

Note that the training accuracy can be different every time the model is trained.

On the original page, click Generate Synthetic Data to use this trained model to generate the required synthetic data.

### 8. Create Synthetic data

You can select the number of samples you want to generate, as well as modify the statistical nature of the data created by choosing the appropriate parameters. For the purpose of this lab, keep all the settings at their default values, and select Start generation to create the required synthetic data.

53	female	28.8	0	no	northwest	2277.83

Click on Download synthetic dataset to download the dataset created.  
You can now use this synthetic data set for data science operations; or, you can also augment the original data set with these samples.

Conclusion

Congratulations! You have completed the lab on data augmentation using the Mostly.ai tool.
